Professional Summary

Full-Stack Web & Mobile Developer, Cloud & Data Engineer, and Solution Architect specializing in building scalable, AI-driven, and event-driven tech ecosystems. Expertise in developing multi-tenant SaaS platforms, real-time analytics dashboards, and cloud-native architectures. Proficient in modern web frameworks (Angular, React, Next.js), backend technologies (NestJS, Spring Boot), data engineering tools (Microsoft Fabric, Power BI, PySpark), and cloud platforms (AWS, Azure).

Professional Experience

Sr. Executive Software Engineer

Palira Inc.

January 2024 – Present

2 years 2 months

- Developed Vapi-powered Scheduler AI SaaS platform for automating dynamic voice campaigns with multi-tenant architecture, enabling EHRs and enterprise systems to integrate intelligent voice workflows
- Created real-time analytics dashboards using Microsoft Fabric and Power BI, integrating ML-driven insights for sales conversion tracking and demand forecasting with improved accuracy
- Built comprehensive EHR portal for USA-based healthcare provider specializing in electronic patient management, enrollment, appointments, tasks, and care plans with secure communication features
- Implemented robust authentication modules using Azure Entra ID, AWS Cognito, and Google authentication across multiple applications
- Developed communication modules enabling secure messaging, voice calls, group calls, and advanced features like call forwarding using Azure Communication Services and Twilio
- Architected event-driven microservices using MQTT, AWS SQS, and SNS for scalable, resilient cloud-native applications with queue-based lifecycle management
- Led full-stack development using Angular, React, Next.js, Flutter for frontend and NestJS, Java Spring Boot, Node.js for backend services
- Designed and optimized database solutions using MySQL, PostgreSQL, and Firebase for high-performance data access
- Built Sales Forecasting and Analytics Platform leveraging Microsoft Fabric for data integration, Python for transformation, and Power BI for interactive dashboards
- Implemented code-driven cloud architecture using Terraform and SAM (Serverless Application Model) for AWS deployments
- Gained hands-on experience in AI/ML deployment pipelines, multi-tenant SaaS architectures, and data engineering workflows

Education

Bachelor of Technology (B.Tech) in Information Technology

J.C. Bose University of Science and Technology, YMCA

August 2020 – May 2024

CGPA: 8.12/10

12th Grade (CBSE)

SPS International

April 2019 – April 2020

95%

10th Grade (CBSE)

SPS International

April 2017 – April 2018

90.04%

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, SQL, Dart

Frontend: Angular, React, Next.js, Flutter

Backend: NestJS, Java Spring Boot, Node.js

Databases: MySQL, PostgreSQL, Firebase

Cloud Platforms: AWS (SQS, SNS, Cognito, SAM), Azure (Communication Services, Entra ID)

Data Engineering: Microsoft Fabric, Power BI, Machine Learning, PySpark

DevOps & Tools: Terraform, SAM (Serverless Application Model), Swagger

Messaging & Communication: MQTT, Vapi AI, Twilio, Azure Communication Services

Specializations: Event-Driven Architectures, Multi-Tenant SaaS, Real-Time Analytics, AI/ML Deployment

Key Projects

Voice Automation Scheduler AI SaaS Platform

Spearheaded VapiCall, a multi-tenant SaaS platform automating outbound voice campaigns using Vapi AI voice assistant with dynamic cohort selection, assistant tool integration, and custom campaign configuration.

Technologies: React, NestJS, Vapi AI, PostgreSQL, AWS

EHR Portal

Developed USA-based EHR portal for electronic patient management with enrollment, appointments, tasks, care plans, and secure communication features including voice calls and call forwarding.

Technologies: Angular, React, NestJS, Java Spring Boot, MySQL, AWS

Sales Forecasting and Analytics Platform

Built business intelligence solution for US-based client to forecast product-level sales using Microsoft Fabric for data integration, Python for transformation, and Power BI for interactive dashboards.

Technologies: Microsoft Fabric, Power BI, Python, Machine Learning

Microservices Events Management

Implemented queue-based lifecycle management with MQTT for reliable event delivery and enhanced system resilience in cloud-native applications.

Technologies: Next.js, Java Spring Boot, MQTT, AWS
